DETAILED ACTION

This Office Action is in response to the Election filed July 25, 2007 for the above identified patent application.

Election/Restrictions

1. Claims 4-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on July 25, 2007.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. Figures 13 and 48 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

4. Claim 3 is objected to because of the following informalities: the comma at the end of claim 3 must be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a. In claim 1, line 11, the limitation "the arm portion" lacks proper antecedent basis. Note the arm portion appears to be defined in line 16.

b. In claim 2, the limitation "starts to be changed" is awkwardly worded making the claim unclear.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's prior art of Figure 13 in view of Pitner (USP 3,964,802).

Figure 13 of the instant application teaches a known linear guide device having a guide rail, a slider, rolling elements disposed between the rail and the slider, the slider having end caps. The prior art device of Fig. 13 does not teach the claimed separators. The prior art to Pitner teaches a linear device having rolling elements (16), separators (23) disposed between the rolling elements, each separator having: a separator body interposed between adjacent the cylindrical rollers; and an arm portion integrally formed on the separator body and facing at least one of axial end faces of the cylindrical rollers, a guide groove (28) guiding the arm portions of the separators, wherein a width of the guide groove is larger than a width of each of the arm portions, the width of the guide groove in a region of each of the direction change paths is larger than the width of the guide groove in a region where the cylindrical rollers linearly move (see figure 1 having hidden lines showing the groove being larger at the end caps), and end portions of each of the arm portions have a radius surface defining a chamfer, the end portions being directed in the circulation direction of the cylindrical rollers. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the linear guide device illustrated in Figure 13 with the separators disposed in guide grooves, as taught by Pitner, motivation being to better guide the rollers for movement in the circulation path.

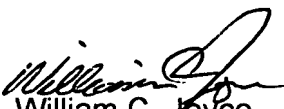

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the separator of Anderson ('398) and Fuhrman et al. ('532).
